

EasiKey 1000

EasiKey is all about simple and easy access control in a system that controls up to two doors (two readers).

Installation is fast and simple and provides a cost effective solution for entry level applications with up to 1000 users, the ability to handle up eight time profiles and the facility to connect to a printer as standard, for easy reporting.

EasiKey 1000 is also available in boxed in a robust metal enclosure pre-wired for quick and easy installation. Commissioning and programming is easy using the built-in keypad and LED display buttons. The optional metal enclosure with cut-out enables easy programming whilst restricting access to the interior of the case.

With the last 1000 transactions (events) recorded in memory, you can easily monitor the movements of people or vehicles through secured access points, such as doors and car park barriers and report them individually or in batches to a printer.

The EasiKey 1000 is compatible with a broad range of ID devices including PAC EasiKey readers, PAC PIN and PAC magnetic stripe readers. The addition of a PAC Wiegand interface allows the connection of other reading technologies such as hands-free, Weigand and infra red.

Remote Key Management:

If you're responsible for PAC EasiKeys installed in multiple occupancy residential blocks and would like a low cost solution to administer key fobs centrally from a location like an area housing office, then EasiKey Manager is for you.

EasiKey Manager will give a degree of control only previously dreamt about. Adding and deleting keys instantly from a remote location improves security in multiple occupancy housing stock and enhances tenant's peace of mind. Additional features include powerful reporting offering automatic reports such as unused token reports. This valuable report could show that a resident may be incapacitated in some way or that the occupant of a flat has left never to return.
